Project Title: Online Land/Property Management System

Brief Description: The Online Land/Property Management System is a full-stack web application designed to simplify the process of managing and exploring property listings. Users can create, update, delete, and search land or property listings, with detailed information such as location, size, price, images, and seller contact details. Buyers can add properties to a wish list, request site visits, and schedule appointments with sellers. Administrators can oversee listings, transactions, and user activity.

Technology usage (Eg: NodeJS, ReactJS):

- Frontend : React.js (or Next.js)
- Backend : Node.js/Express
- Database : MongoDB
